

K Square Enterprise Product & Process

What we Do

We'll help you treat mold at its source, helping you to discover the cause of mold growth and identify proactive next steps. Best of all, our mold remediation is safe for pets and children, when used as directed. That means minimal disruption to your home, with maximum impact on mold growth.

How we Work

We adhere to the guidelines and standards of our industry. Our powerful treatment spray is EPA-certified, and our experts follow the guidelines of ANSI/IICRC S520, for safe and effective mold remediation in your home.

Most conventional mold removal requires costly construction and abrasive chemicals. Instead, we preserve the surface materials in your home for minimal teardown, using a fine-tipped applicator to access hidden mold growth.

When we treat your property, we want to help prevent future mold growth. That's why we utilize our proprietary spray, which contains plant enzymes that consume mold at a molecular level. Our spray can also denature bacteria, fungi, and other toxins

K-1Mold	Competitors
Contains plant based enzymes.	Most are synthetic chemicals.
Catalytic, keeps on working.	Very reactive. Energy used up instantly.
Breaks down allergenic proteins in spores	No
Fine spray application reaches everywhere.	No
Helps prevent growth.	No
